

VolvoContents

Front & Rear suspension, Steering	1~32
Coil Spring, Absorber	33~37
Wheel Bearing	38~43
Brake Part	44~72
Cable	73~75
CV-Joint, Bearing Cage	76~78
Engine & Gearbox Mount	79~85
Clutch & Gearbox Part	86~96
Engine Part/Manifold/Turbo	97~99
Exhaust	100~111
Engine Part	112~136
Filter	137~140
Belt & Tensioner	141~150
Gasket, Gasket Set	151~167
Waterpump	168~171
Fuel	172~178
Electrical	179~204
Heating & Cooling	205~223
Light	224~237
Body	238~255
Wind Shield Part	256~267
Switches, Relays	268~278
Gas Spring	279~280
Uni-Fit Universal CV Boots	283

Cross Reference List at the end of Catalog

Air Temp Thermostat					
240, 260 740, 760 The thermostat opens the fresh door for air moving across the Air Mass Meter after the engine warms up. When it fails, hot air constantly flows to the Air Mass Meter which can lead to premature Air Mass failure.			1266826	51.6826

Oxygen Sensor Tester

Art No. 51.1300

This inexpensive tool quickly and easily tests oxygen sensors

The oxygen sensor senses the amount of oxygen in the exhaust after combustion. It then produces a voltage of 0 to 1 volt. If the amount of oxygen in the exhaust is high the oxygen sensor will produce a low voltage (below 450 millivolts). If the amount of oxygen in the exhaust is low the sensor will produce a high voltage (above 450 millivolts). The Scan-Tech oxygen sensor tester easily tests the voltage output from the oxygen sensor. An LED lights when the sensor produces a high voltage and goes off when the sensor falls below a low voltage. This tester can make testing an oxygen sensor simple.

Scan-Tech's Oxygen Sensor Tester features:

- On-Off Switch
- LED light that indicates if sensor's output voltage is OK
- Easy-to-follow instructions
- Easy-to-use wire-piercing connector
- 1-year limited warranty

9-volt alkaline battery required

Titanium Oxygen Sensor

Type	Art No.	
Three Wired Colour: Black Connection: Signal out Red Heat + White is Signal feed Heat -	51.11015	
Four Wired Colour: Black Connection: Signal out Red Heat + White Heat - Yellow Signal in	51.11016	

Checklist:

1. Check the number of cables on the Original Sensor
2. Check the colour of the cables.
A. If the Original Sensor has a Black, Grey, Purple or White cable it's a ordinary Sensor.
B. If the Sensor has a Red cable it's a Titanium Oxygen Sensor.

What They Do:

The Oxygen Sensor (also know as Lamda sensor) is located in the exhaust manifold. It measures the amount of 'unburned' oxygen in the exhaust and signals the car's onboard computer whether the mixture is too lean or too rich.

Failure Symptoms:

- High hydrocarbon emissions, failing an emissions inspection.
- The engine warning light may be on or service flag displayed.
- Excessive fuel consumption, a faulty oxygen sensor can waste 30% of fuel.
- Driveability problems, such as engine surge or hesitation.
- The ECU/computer stores a mixture-related fault code.
- When the oxygen sensor has stopped functioning completely, the catalytic converter may over heat and fail.

Maintenance/Service:

- Test and/or replace every 30.000 miles.
- Perform periodic emission checks.
- Watch for service light.
- Vehicle manufacturers recommend periodic inspection and replacement of Oxygen Sensors.

Air Temp Thermostat					
240, 260 740, 760			1266826	51.6826	
			The thermostat opens the fresh door for air moving across the Air Mass Meter after the engine warms up. When it fails, hot air constantly flows to the Air Mass Meter which can lead to premature Air Mass failure.		
Temp Compensator Board					
240	1985~		1363117	51.3117	
			Failure on Temp comp. board makes failure on Temp gauge and Fuel gauge meter.
